Introduction

This documentation outlines the structure, features, and implementation of a portfolio website that presents an overview of professional experience, technical skills, certifications, and provides multiple ways for visitors to connect. The site is organized for intuitive navigation and accessibility, allowing users to explore content and initiate contact directly through the web interface. Built with semantic HTML, CSS, JavaScript, and Bootstrap 5 for responsive layout and styling, the website includes clearly defined sections such as Home, About, Tech Stack, Certificates, Experience, Blog, and Contact. Each section serves a specific purpose: the home section welcomes visitors; the About section introduces the site and offers direct links to professional social media profiles; the Tech Stack, Certificates, and Experience sections

display relevant information using visually distinct cards and layouts; the Blog section is integrated within the site to share posts and updates; and the Contact section features an interactive form for direct communication. Supabase is used as the backend to securely store messages submitted through the contact form, with client-side validation ensuring data integrity and a real-time notification system providing feedback upon submission. Accessibility is prioritized through semantic markup and ARIA attributes, and all components are optimized for a consistent user experience across devices.

Project Description

This portfolio website is a modern, responsive platform designed to showcase professional skills, experiences, and achievements. Built using semantic HTML, custom CSS, and JavaScript, it incorporates Bootstrap 5 for responsive layouts and UI components. The website integrates Supabase as the backend to securely store and process contact form submissions. The navigation bar provides seamless access to sections such as Home, About, Tech Stack, Certificates, Experience, Blog, and Contact. Each section is designed with a focus on clarity and user engagement. The Home section features a hero banner introducing the site owner with a professional photo and a brief biography. The About section highlights the academic journey, personal growth, and aspirations, with accessible social media links for networking. The Tech Stack section displays technical skills using visually distinct cards styled with CSS and Bootstrap utilities. The Certificates section showcases certifications with an interactive modal feature for detailed viewing. The Experience section chronicles academic milestones using a visually appealing timeline. The Blog section links to blog posts authored by the site owner, sharing insights and expertise. The Contact section includes a modern, glass morphic form with client-side validation. Messages are securely stored in Supabase, and users receive real-time feedback upon submission. Accessibility is prioritized through semantic markup and ARIA attributes, ensuring an inclusive experience for all users. The site is optimized for fast loading and provides a consistent user experience across devices.

Problem of Statement

In today's competitive digital landscape, professionals need an effective and accessible platform to showcase their skills, experiences, and achievements while enabling visitors to initiate contact conveniently. Traditional static resumes and portfolios often lack interactivity, real-time communication features, and modern design elements that engage users and facilitate networking.

This project addresses these challenges by implementing a responsive, user-friendly portfolio website. It organizes professional information in an intuitive manner and integrates secure, real-time contact functionality through Supabase. Additionally, the site enhances visibility and networking opportunities by incorporating accessible design, social media connectivity, and seamless navigation. This ensures that visitors can explore the portfolio effortlessly while enabling direct communication with the site owner.

Project Objectives

1. Creation of a Structured Portfolio with Comprehensive Content

- Analysis**:**
  Each section of the portfolio contributes to presenting a cohesive narrative of the user's professional profile.
  - The **Home** and **About** sections offer an introduction and personal context, helping users connect on a more personal level.
  - The **Tech Stack**, **Certifications**, and **Experiences** demonstrate technical proficiency and qualifications, providing credibility and transparency.
  - The **Blog** section fosters intellectual engagement by showcasing thought leadership or expertise.
  - **Evaluation:**
    This objective aligns with the growing demand for centralized online profiles that can act as dynamic resumes, meeting professional and academic needs.

2. Implementing Interactive Contact Features with Supabase Backend

- Analysis:
  The Contact section serves dual purposes: offering direct links to professional profiles on GitHub and LinkedIn and providing a form for personalized communication. Supabase, chosen for its backend services, supports data collection and security, enhancing functionality.

- Key functionalities include:
  - *Form validation to ensure data accuracy.*
  - *Secure handling of user input through Supabase's authentication and database management capabilities.*
  - *Easy data retrieval for the user to track and manage communications.*
  - Evaluation:
    The use of Supabase ensures that the contact form is not just functional but also secure, adhering to modern data protection and compliance standards. This adds a critical layer of professionalism to the project.

3. Creating a Visually Appealing and Responsive Website

- Analysis:
  Front-end frameworks such as React.js enable the creation of a visually engaging and user-friendly interface. The portfolio is designed to:
  - Adapt seamlessly across various devices (mobile, tablet, and desktop).
  - Use intuitive layouts for enhanced navigation and improved user experience.
  - Include dynamic elements where appropriate to maintain user engagement.
  - **Evaluation:**
    This objective directly supports the goal of accessibility and professionalism, making the portfolio stand out in competitive environments.

4. Maintaining Security and Privacy of User Data

- Analysis:
  Integrating Supabase's security features, such as row-level security and token-based authentication, ensures compliance with data privacy requirements. This is particularly significant given the sensitivity of user-submitted data via the contact form. The robust backend design minimizes the risk of data breaches.

  - Evaluation*:*
    Security-focused design builds trust among users, a crucial factor for any project handling personal data.

Strengths of the Project:

- The portfolio integrates essential sections for a professional online presence.
- Emphasis on secure data handling reflects awareness of modern cybersecurity challenges.
- The use of modern tools like Supabase and React.js ensures scalability and reliability.
- The responsive design and comprehensive content sections make the portfolio versatile and impactful.

Project Conceptual Framework

Input

1. User Data:
    - Visitors viewing the portfolio.
    - Contact form input (name, email, message).
2. Portfolio Content:
    - Static information: Home, About, Tech Stack, Certifications, Experiences, Blog.
    - Contact links (GitHub, LinkedIn).

Process

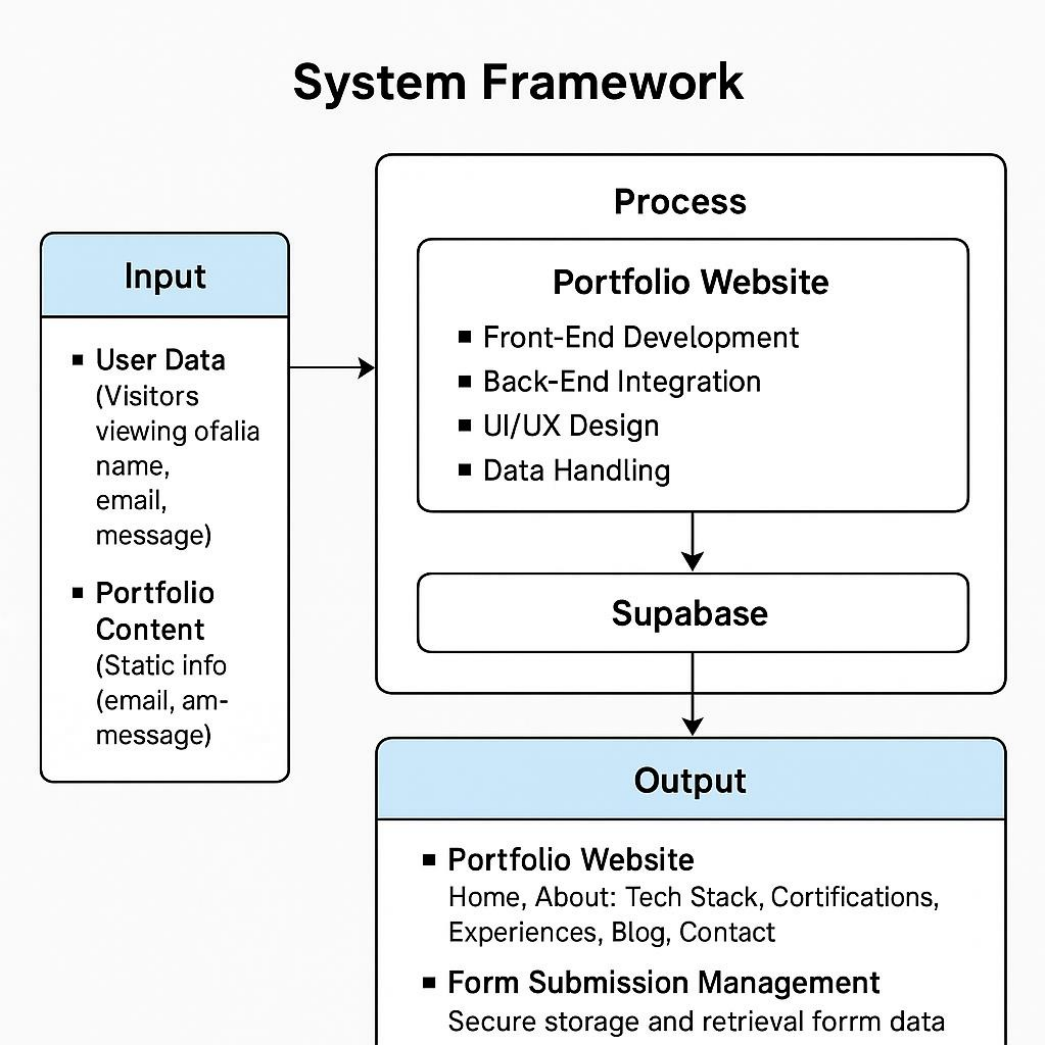

1. Front-End Development:
    - *Create responsive web pages for **Home**, **About**, **Tech Stack**, **Certifications**, **Experiences**, **Blog**, and **Contact** sections using modern front-end frameworks (e.g., React.js, Vue.js).*
    - *Ensure optimized display for various screen sizes (mobile, tablet, desktop).*
2. Back-End Integration:
    - Use **Supabase** for:
      Storing form submissions securely in a database.
    - Ensuring authentication and data privacy compliance.
3. UI/UX Design:
    - Intuitive layout for each section with a focus on user-friendly navigation and aesthetics.
    - Form validation for the **Contact** section (e.g., required fields, valid email format).
4. Data Handling:
    - Form submissions sent to Supabase backend for:
    - Storing contact form inputs.
      Notifying site admin (e.g., via email or dashboard integration).
5. Security Features:
    - Use Supabase's security features like row-level security and token-based authentication to ensure data integrity and user privacy.

Output

1. Portfolio Website:
    - Home: Welcome message and overview.
    - About: Personal introduction and mission statement.
    - Tech Stack: Display of technologies and tools proficiency.
    - Certifications: List of certifications with details (e.g., title, issuer, date).
    - Experiences: Overview of professional experience.
    - Blog: Optional blog posts/articles (read-only).
    - Contact:
        - Links to GitHub and LinkedIn profiles.
        - Form submission capability with acknowledgment after successful submission.

2. Form Submission Management:
    - Secure storage and retrieval of form data via Supabase.
    - Enhanced security with minimal exposure of sensitive information.

System Framework

Project Scope: Personal Portfolio Website

1. Project Overview

The Personal Portfolio Website is designed to showcase an individual's professional profile, skills, and achievements while enabling interactive communication through secure data handling. The website integrates modern front-end technologies, intuitive UI/UX design, and a Supabase-powered backend for dynamic and secure functionality.

2. Features and Functionalities

A. Core Sections

1. Home
    - Welcome message and a brief overview of the portfolio.
    - Navigation to all major sections.
2. About
    - Personal introduction (e.g., name, background, mission).
    - Visual elements such as a profile image or graphical representation.
3. Tech Stack
    - Display of technical skills and tools expertise.
    - Optionally categorized into various programming languages, frameworks, databases, and tools.
4. Certifications
    - List of certifications, including the title, issuer, and issuance date.
    - Optionally, provide clickable links to view certificates.
5. Experiences
    - Summarized display of professional and academic experiences.
    - Chronological order with job/role titles, organizations, and key accomplishments.
6. Blog
    - Display a curated list of blog posts or articles.
    - Read-only functionality without external sharing or commenting options.

7. Contact
    - Direct links to GitHub and LinkedIn profiles.
    - A functional contact form that accepts the following:
        - Name
        - Email address
        - Message content

B. Backend Features (Powered by Supabase)

1. Contact Form Management
    - Store submitted contact data securely in a Supabase database.
    - Ensure proper encryption and access control for sensitive information.
2. Security Measures
    - Implement row-level security to restrict access to stored data.
    - Token-based authentication for database access.

C. Front-End Functionalities

1. Responsive Design
    - Optimize the website for mobile, tablet, and desktop users.
    - Ensure consistency across browsers and platforms.
2. Interactive UI
    - Smooth navigation between sections.
    - Interactive form validation for the Contact section.
3. Modern Design Aesthetics
    - Utilize contemporary design trends for a professional appearance.
    - Incorporate animations or transitions to enhance user experience.

3. Deliverables

1. Fully Functional Website
    - All sections implemented as per the defined features.
2. Secure Backend System
    - Supabase integration for data storage and security.
3. Documentation Plans
    - Technical documentation for future maintenance and upgrades.
    - Interactive user guide for operating and updating content on the website.

4. Technical Requirements

Front-End:

- React.js (or similar modern JavaScript frameworks).
- CSS frameworks (e.g., TailwindCSS, Bootstrap).

Back-End:

- Supabase for database, authentication, and API management.

Hosting:

- Deploy on platforms like Vercel, Netlify, or AWS for scalability and performance.

Others:

- GitHub for version control.
- Integration with SendGrid or similar services for email notifications (optional).

5. Limitations

- Static blog functionality (read-only; no commenting or sharing).
- No support for multi-language content (single-language interface).
- Contact form submissions depend on internet connectivity for backend operations.
- Planning **& Design**: 2 weeks
- **Development**: 3 weeks
    - Front-end: 2 weeks
    - Back-end (Supabase integration): 1 week
- **Testing & Debugging**: 1 week
- **Deployment**: 2 days

7. Target Audience

- Recruiters and hiring managers.
- Networking professionals.
- Potential collaborators and clients.

8. Success Criteria

- Fully functional and responsive website with seamless navigation.
- Secure data management for the Contact form using Supabase.
- Positive feedback from initial users on design and usability.

Project Boundaries (Limitations)

1. Included in the Project

1.1 Front-End Development

- Development of a **fully responsive** website using modern technologies (e.g., React.js, CSS frameworks like TailwindCSS).
- Implementation of seven sections:
    1. **Home**: Introductory content and navigation.
    2. **About**: Overview of personal background and mission.
    3. **Tech Stack**: Visual representation of technical skills and tools.
    4. **Certifications**: Display of certifications with optional links to details.
    5. **Experiences**: Professional and academic achievements.
    6. **Blog**: Read-only content showcasing expertise or thought leadership.
    7. **Contact**: Links to GitHub and LinkedIn profiles, as well as a contact form.

1.2 Backend Integration with Supabase

- Contact Form: A functional form to collect name, email, and message inputs.
- Database Management: Secure storage and handling of form submissions.
- Authentication & Security: Use of Supabase features, such as token-based authentication and row-level security.

1.3 Security Measures

- **Data Protection**: Implementation of best practices to ensure data integrity and compliance with privacy standards.
- **Form Validation**: Prevent invalid or incomplete form submissions through client-side and server-side validation.

1.4 Hosting and Deployment

- Deployment of the portfolio on hosting platforms like Vercel, Netlify, or AWS.

1.5 Documentation

- Creation of interactive technical documentation for developers and users.

2. Excluded from the Project

2.1 Advanced Blog Features

- **Commenting**: Visitors cannot leave comments on blog posts.
- **Sharing**: No functionality to share blog posts directly to social media platforms.
- **Dynamic Blog Management**: Blog posts are static and must be updated manually; no CMS integration is included.

2.2 E-Commerce or Payment Functionality

- No integration of payment systems or subscriptions (future development), or e-commerce features (future development).

2.3 Multi-Language Support (Current)

- The portfolio will only support a single language (English) and will not include features for multilingual content. Being considered for future development.

2.4 Analytics and Tracking

- Tools like Google Analytics for tracking user behavior and website traffic are not included but can be added in future iterations.

2.5 Notification Systems

- No email or SMS notifications are sent for new form submissions, though this feature may be implemented later using tools like SendGrid.

2.6 Complex Customizations

- Customizable themes, layouts, or advanced UI configurations are not included.
- The portfolio's structure will be static with minor adjustments allowed through code changes.

3. Limitations and Constraints

3.1 Hosting Dependencies

- The performance of the website depends on the hosting platform. Any downtime or limitations from the hosting provider are outside the project's control.

3.2 Data Privacy Compliance

- The system ensures secure handling of user data via Supabase, but full compliance with global data regulations (e.g., GDPR) depends on the hosting environment and database configurations.

3.3 Browser Compatibility

- While modern browsers (e.g., Chrome, Edge, Safari) are supported, older or outdated browsers may not render the portfolio optimally.

3.4 User-Generated Data

- No provisions for updating or deleting user-submitted contact form data from the database.

3.5 Scalability

- The project is designed for a single user (individual portfolio). Scaling the system for multiple users or accounts is outside the project's scope.

4. Justification for Exclusions

- **Complexity Reduction**: Limiting advanced blog features, analytics, and notifications keeps the project manageable within the timeframe and resources available.
- **Focus on Core Objectives**: The exclusion of multi-language support and customizable themes ensures that the development remains focused on delivering a functional and secure portfolio.
- **Futureproofing**: Features like CMS integration, analytics, and notifications can be implemented in future iterations, depending on user needs and resource availability.

Significance of the Project

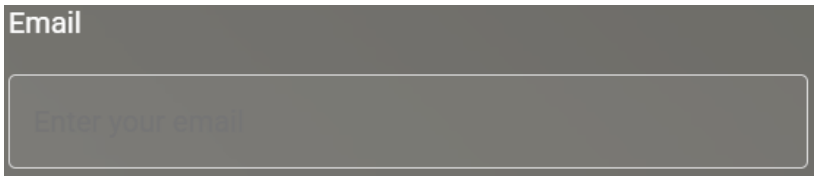

The project addresses the need for streamlined communication between users and the website owner. Allowing users to input their name, email, and message into a database system that stores the data ensures that messages are recorded, retrievable, and traceable. This project enhances user interaction with the site owner, a key factor for feedback management.

Project Screen Design (System Interfaces)

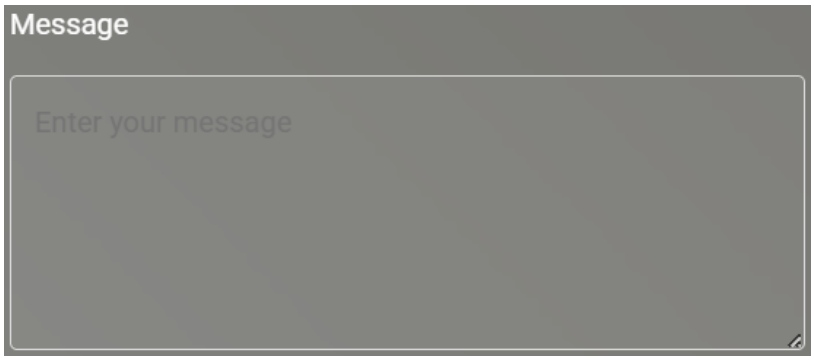

- **Input Interface:**
    - A web form containing:
        - Text field for Name

        - Email field

        - Text area for Message

        - Send Message Button

- **Process Interface:**
    - Uses Supabase that:
        - Validates input (e.g., proper email format, required fields)

        - Sanitizes data to prevent SQL injection or spam
        - Stores the input in a database table

        - Real-time message delivery and storage in a database

- **Output Interface:**

  Confirmation Message ("Message stored in database!")

Project Database Design

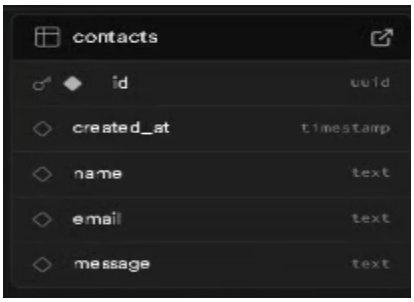

- **Database Name:** FormInput

- **Table Name:** contacts

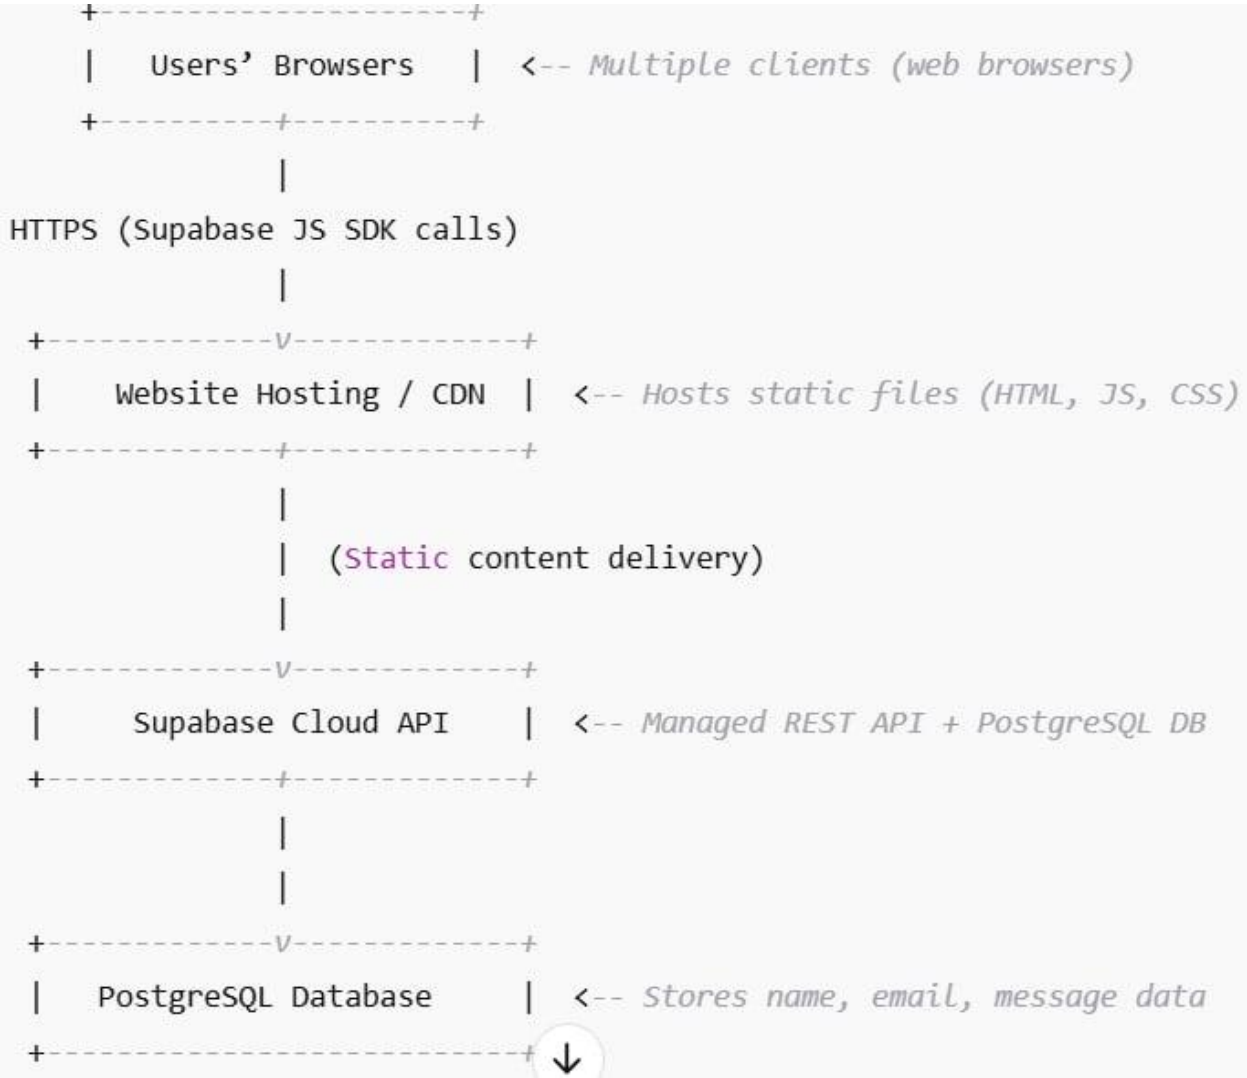

- **Table Fields:**

Project Network and Communication Framework (Network Topology Design)

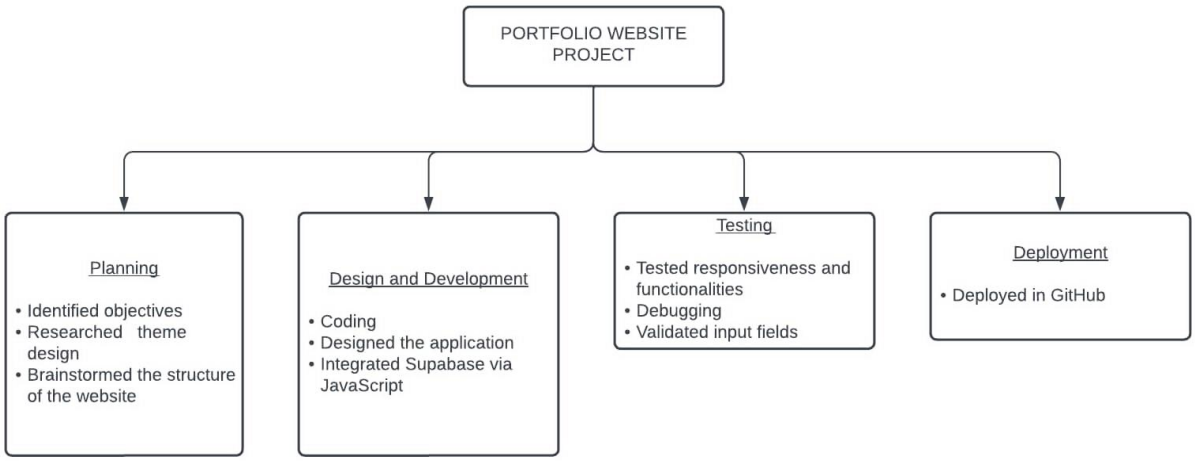

- **Network Topology:** Client-Server Architecture

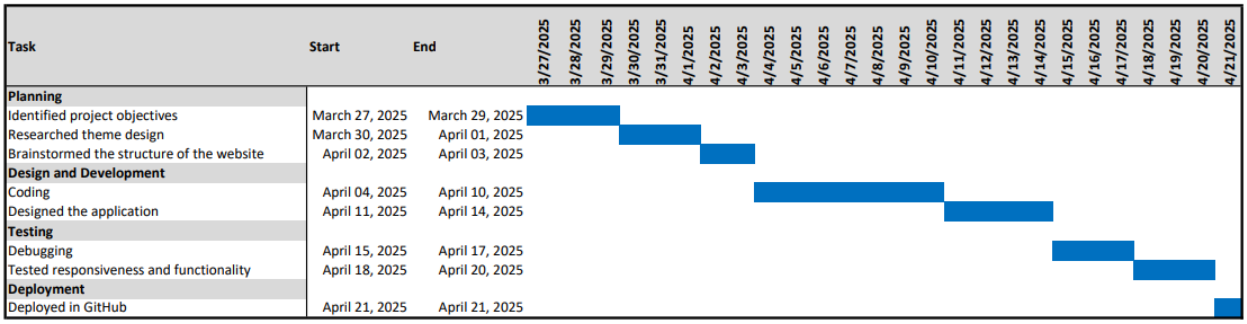

Project Quality Checklist

Criteria	Description	Status
Functionality	Can the user submit name, email, and message?	✅
Validation	Are inputs properly validated (e.g., required, correct email)?	✅
Security	Is input sanitized to avoid SQL injection?	✅
Data Integrity	Are messages saved correctly in the database?	✅
User Feedback	Does the user receive confirmation after sending?	✅
Accessibility	Is the form usable on various devices?	✅
Performance	Does the system process submissions quickly?	✅
Backup	Is the data regularly backed up?	❌
Testing	Has the system been tested with various inputs?	✅
Documentation	Is there documentation for setup and usage?	✅

Project Work Breakdown Schedule

Project Gantt Chart

Task	Start	End
Planning		
Identified project objectives	March 27, 2025	March 29, 2025
Researched theme design	March 30, 2025	April 01, 2025
Brainstormed the structure of the website	April 02, 2025	April 03, 2025
Design and Development		
Coding	April 04, 2025	April 10, 2025
Designed the application	April 11, 2025	April 14, 2025
Testing		
Debugging	April 15, 2025	April 17, 2025
Tested responsiveness and functionality	April 18, 2025	April 20, 2025
Deployment		
Deployed in GitHub	April 21, 2025	April 21, 2025

Project PERT & CPM

Equipment usage expense	₱500 – ₱1,500

Benefits	
Revenue from freelance website development	₱5,000 – ₱10,000

Project Communication Management (Method)

Communication Type	Tool	Purpose	Frequency
Developer Updates	Messenger	Track tasks, assign progress	As needed
Team Coordination	Gmeet/Messenger	Quick questions, meetings	As needed
Documentation Sharing	Ms word/Messenger	Share reports, collaborate	Weekly updates
Final Delivery	Google Drive	Submit final report and files	Once

Project Risk Management

Effective risk management ensures the success and sustainability of the portfolio website project by identifying potential threats, assessing their impact, and implementing mitigation strategies. This section outlines the systematic process of risk identification, analysis, response planning, and monitoring tailored to the technical and operational scope of the project.

1. Risk Identification

The following risks have been identified for the development and deployment of the portfolio website:

Risk ID	Category	Description
R1	Technical	Supabase service downtime or API failure affecting contact form functionality.
R2	Security	Exposure of contact form to spam or malicious input due to inadequate validation.
R3	Performance	Slow load times or rendering issues on certain devices or browsers.
R4	Compatibility	Inconsistent behavior across different screen sizes or legacy browsers.
R5	Data Integrity	Loss of user-submitted messages due to misconfigured Supabase database rules.
R6	Accountability	Non-compliance with WCAG guidelines reducing usability for disabled users.
R7	Maintenance	Difficulty updating site content due to hardcoded structures or lack of CMS.

2. Risk Analysis

Each identified risk is evaluated based on its Likelihood (L) and Impact (I) on a scale of 1 (Low) to 5 (High):

Risk ID	Likelihood (L)	Impact (I)	Risk Score (L x I)	Priority
R1	3	4	12	High
R2	4	5	20	Critical
R3	3	3	9	Medium
R4	2	4	8	Medium
R5	3	4	12	High
R6	2	3	6	Low
R7	3	2	6	Low

3. Risk Response Plan

Risk ID	Response Strategy	Mitigation Actions
R1	Mitigate	Implement error-handling for API calls; log failed submissions locally as backup.
R2	Mitigate	Apply CAPTCHA, sanitize inputs, and use Supabase row-level security (RLS).
R3	Accept + Optimize	Use lazy loading, optimize assets, and deploy on a CDN.
R4	Mitigate	Conduct cross-browser/device testing during development.
R5	Mitigate	Regularly test Supabase database rules and enable logging for contact submissions.
R6	Mitigate	Use semantic HTML and test with screen readers; apply ARIA roles consistently.
R7	Accept + Document	Provide developer documentation for future updates and content insertion.

4. Risk Monitoring and Control

Risk monitoring will be carried out continuously throughout the development lifecycle. Key practices include:

- Automated testing for form input validation and responsiveness.
- Periodic backups of the Supabase database.
- User feedback loop via the contact form to detect bugs or usability issues.
- BrowserStack or similar tools for cross-device testing.
- Accessibility audits using tools like Lighthouse or Axe.

A change log and issue tracker will be maintained using GitHub to log risk events and responses during project execution and after deployment.

Stakeholder Project Acceptance Survey Form

Project Title:
Simple Contact Form System with Database Integration (Supabase)

Stakeholder Name: _____
Position/Role: _____
Date: _____

Instructions:

Please review the following aspects of the system and rate your level of satisfaction using the scale below:

Rating Scale

5 – Strongly Agree

4 – Agree

3 – Neutral

2 – Disagree

1 – Strongly Disagree

I. Functionality Evaluation

Statement	1	2	3	4	5
1. The system successfully collects Name, Email, and Message.	☐	☐	☐	☐	☐
2. The form is easy to use and understand.	☐	☐	☐	☐	☐
3. The submission process is smooth and intuitive.	☐	☐	☐	☐	☐
4. Data is properly stored in the database (Supabase).	☐	☐	☐	☐	☐
5. The system performs consistently without errors.	☐	☐	☐	☐	☐

II. Design and Usability

Statement	1	2	3	4	5
6. The form design is clean and user-friendly.	☐	☐	☐	☐	☐
7. The system interface is accessible on both desktop and mobile devices.	☐	☐	☐	☐	☐
8. Instructions and feedback (e.g., submission confirmation) are clear.	☐	☐	☐	☐	☐

III. Overall Satisfaction

Statement	1	2	3	4	5
9. The system meets the project goals and objectives.	☐	☐	☐	☐	☐
10. I am satisfied with the overall system performance.	☐	☐	☐	☐	☐
11. I would recommend this system for actual deployment or use.	☐	☐	☐	☐	☐

IV. Comments and Suggestions

Appendices

Appendix A – Definition of Terms (Technical & Operational)

Term	Definition
HTML	HyperText Markup Language; used to structure content on the web.
CSS	Cascading Style Sheets; defines the style and layout of web pages.
JavaScript	A scripting language used to create and control dynamic website content.
Bootstrap 5	A front-end framework for developing responsive and mobile-first websites.
Supabase	An open-source backend-as-a-service providing database, authentication, and storage features.
Frontend	The visual part of a website or application with which users interact directly.
Backend	The server-side logic, databases, and APIs that power the website or application.
Form Validation	A process to ensure user input is correct and complete before submission.
ARIA	Accessible Rich Internet Applications; attributes that improve accessibility for screen readers.
Responsive Design	Web design approach that ensures content displays correctly on different devices.
Token-Based Authentication	Security methods use tokens to verify user identities without storing session data.
Row-Level Security	Database security that allows fine-grained access control to rows in a table.
Glassmorphism	A UI design trend involving frosted-glass-like transparent surfaces.

Appendix B – Project Deployment Contract

1. Parties Involved

- Developer/Project Owner
- Client/User

2. Project Deliverables

- Fully functional and responsive portfolio website.
- Integrated Supabase backend for secure contact form submissions.
- Sections included: Home, About, Tech Stack, Certificates, Experiences, Blog (read-only), and Contact.
- Deployment to a hosting platform (GitHub host).

3. Timeline

- Planning: 8 days
- Development & Design: 11 days
- Testing & Debugging: 6 days
- Deployment: 1 day

4. Scope of Deployment

- Hosting the website on GitHub

5. Security & Data Handling

- Contact form data is encrypted and stored in Supabase with row-level security.
- No third-party access to user-submitted data unless explicitly authorized.

6. Maintenance & Support

- No ongoing support contract; maintenance is the responsibility of the site owner.

7. Limitations

- Static blog content (read-only).
- No user authentication or admin dashboard.
- Data backups are not automated unless configured manually.
- No integration of analytics or external notifications.

8. Acknowledgment

- By launching this project, the developer acknowledges that the deployed site adheres to the scope and quality standards specified in this documentation.

Curriculum Vitae

JUSTINE M. LOPEZ

Address: Lot 2 BLK 14 Rimas Street, Meadowood Executive Village, Bacoor City, Cavite 4102

DANIELLE CRUZ

Location: Pasig, Metro Manila

Internship Duration: September 2023 – December 2023

EDUCATION

St. Dominic College of Asia, Information Technology (No Degree)

PROFESSIONAL SUMMARY

Detail-oriented and driven individual with internship experience at the Development Academy of the Philippines. Demonstrated ability to multitask under pressure, maintain high levels of organization, and utilize Microsoft Office tools efficiently.

PROFESSIONAL EXPERIENCE

- Development Academy of the Philippines – Intern
- Managed and organized documents and digital records
- Handled spreadsheets and report tracking
- Strengthened multitasking and deadline management skills

SKILLS

- Quick Learning
- Computer Literacy
- Spreadsheet and Document Management
- Microsoft Office Proficiency
- Multitasking & Organizational Skills
- Attention to Detail

PROFESSIONAL PROFILE

I am a 27-year-old student currently studying at Saint Dominic College of Asia. I am passionate about helping others, programming, and creative design. I see learning as a lifelong journey driven by both personal growth and professional development. With strong faith and dedication, I strive to apply my skills to make a meaningful impact, especially through technology and design.
